Uraplast[®] **RA 25** is a pale yellow liquid, anhydrous with a low odour and free from matter in suspension. It is soluble with common organic solvents, practically insoluble in water and miscible and compatible with most of the monomeric plasticizers usually utilized to soften PVC (it is good laboratory practice to make a preliminary compatibility test in the specific PVC compound being considered).

The product **Uraplast[®] RA 25** due to its nature does not have a shelf life. However it can be stored in appropriate containers at a temperature of approximately 25 °C and the exclusion of humidity for at least 1 year, without loosing its chemical properties.

Liquid properties

| Temperature (°C) | Viscosity (mPa·s) |
|---------------------|----------------------|
| 15 | 32000 |
| 20 | 20500 |
| 25 | 14000 |
| 40 | 4860 |
| 60 | 1650 |

The above figures are typical values and should not be considered as specifications limits.

For further information on the characteristics and properties of **Uraplast[®] RA 25** in the liquid state, see the relevant EC-standard Materials Safety Data Sheet.

General properties in PVC compounds

The properties of **Uraplast[®] RA 25** were evaluated in comparison with those of **DIPLAST[®] NS (DINP)** using the following formulation:

| Formulation | PVC K70 | Plasticizer | Ca/Zn | Stearic Acid |
|-----------------------|---------|-------------|-------|--------------|
| (parts by weight)phr | 100 | 50 | 1.2 | 0.3 |

The specimens were prepared by calendering and moulding to obtain the thickness required for the different test methods.
